

FINALLY!

Åsgårdstrand, 19 January 2012

After a very rigorous and thorough development period, Scanmar's R&D Department declared today that the SS4 Door sensors with Distance had passed all physical and technical tests and were ready for a trial production. The production of the final version will start in the beginning of summer.

With long operation time of the batteries, short charging time, and combination possibilities with Door Angle, Depth and Temperature, there are many who have already lined up to get the new sensors.

The first in line to receive the sensors, who had their new sensors sent today, are:

AXØ
Christer Axelson, Koster Sweden

SEA WOLF
Tikhrybkam, Magadan Russia

Distance sensors are among the most popular sensors. More than 6.000 sets have been delivered since their introduction in 1984.

As you can understand, production volumes are a currently limited. Waiting time between placing orders and delivery must be expected. Orders will be processed in the order they are received.
